KPI Management

PRIME helps organizations to continually assessing the KPI data at all times and measuring performance against key business objectives and their relevance the operations. PRIME is designed for the KPI analysis to be specific, measurable, attainable, relevant and time bound.

Project Management

The Project Management module plan, track and deliver tasks and projects on time. The project management module fully integrates the resources scheduling and advanced analytics functionality.

Report Management

This module enables management to visualize a complete picture on each project, resources, skills or any relevant data on the operation of an organization as a whole. There's a fully integrated reporting module for generating reports in one click.

Task Management

All task assigned from superior trickling down to the person who is responsible to complete the task are recorded. The whole process, outcomes, challenges, resource and time taken dedicated to the assigned task all are being stamped digitally in PRIME. This allowing the management to have a bird eyes view on the development and shortfall of the assignment from beginning to end.

Workload Management

Workload Management module aims to optimize organizations' resources to maximize productivity. The module does the matching of task assigned to the required and available resources. In the long run, the need of human resources can be carefully planned to achieve the objectives of each assigned tasks.
